PROJECTS

DevBoard (Task Management UI)

React, JavaScript, CSS

- Developed a fully responsive Kanban-style task management interface enabling users to create, update, and organize tasks across multiple stages (To-Do, In Progress, Completed).
- Implemented drag-and-drop functionality for seamless task movement using modern React libraries, improving usability and workflow efficiency.
- Designed modular and reusable components using React hooks for effective state management and dynamic UI rendering.
- Enhanced user experience by integrating real-time UI updates without page reloads, ensuring smooth interaction.
- Optimized performance by minimizing unnecessary re-renders through memoization and efficient state updates.
- Focused on clean UI/UX design principles, ensuring accessibility and responsiveness across different screen sizes.

Airbnb Clone API Modernization

Node.js, Express, MongoDB, ES6

- Refactored an Airbnb-style full-stack project into an API-first backend by migrating CommonJS modules to modern ES6 `import/export` syntax.
- Removed server-side rendered views and static frontend assets to convert the application into a clean RESTful backend service.
- Redesigned controllers and routes to return structured JSON responses with consistent success and error formats.
- Implemented authentication APIs using Passport.js with session-based login, signup, logout, and protected route access.
- Built listing and review APIs with modular route, controller, middleware, and Mongoose model architecture.
- Added request validation using Joi and improved error handling for authentication, ownership checks, and review authorization.
- Created API documentation and a Postman collection for testing listing, review, and authentication endpoints.

FileShare Backend Service

Node.js, Express, MongoDB

- Built a backend service to enable users to upload and share files securely via unique, time-limited download links.
- Developed RESTful APIs for file upload, retrieval, and deletion, ensuring efficient file handling and management.
- Designed database schema to store file metadata, download counts, and expiration logic.
- Implemented secure access control using token-based validation to prevent unauthorized file downloads.
- Optimized file upload handling to support large file sizes while maintaining performance and stability.
- Added automatic file expiration and cleanup mechanisms to manage storage efficiently.
- Ensured robust error handling and validation for all API endpoints.

EDUCATION

Dr. Ambedkar Institute of Technology For Divyangjan, Kanpur

Uttar Pradesh, India

Bachelor of Technology in Computer Science and Engineering

2023 – 2027

CGPA: 6.90 (*till 5th Semester*)

TECHNICAL SKILLS

Languages: C++, Python, JavaScript

Frameworks/Libraries: React, Node.js

Tools: Git, GitHub, Postman, Antigravity

PROFILES

LeetCode — CodeChef — Portfolio Website
